

As a community, we have focused on establishing a number of norms (ways of working) this week. We have also focused on a few messages about the learning and teaching of mathematics. Please respond to the following prompts from your perspective as a PMI workshop participant. There are no right or wrong answers to these prompts – we want you to respond from your perspective.

1. Briefly describe three (3) different norms that we have established about participating in the workshop activities.

2. Briefly describe two (2) different norms we have established about being a productive group member.

3. Briefly describe two (2) messages that you have taken from the workshop (thus far) about what it means to “know” and “do” math.

4. Briefly describe two (2) messages that you have taken from the workshop (thus far) about teaching math.
