The Aerodynamics and Chassis subsystems have been working to manufacture their parts of the car. The monocoque is in progress as of now, and multiple pieces of the front wing are completed. When the endplates are finished, the wings will be ready to be assembled and mounted to the completed monocoque.

Controls, brakes and safety has been working on the pedal tray template and the steering wheel design. The uprights are ready to be made on MasterCAM and made by the manufacturing members. They have also been working on machining aluminum suspension components that will be used with the carbon tubing that will be on this year’s car.

The powertrain subsystem has multiple dedicated members that have been finalizing designs for the 2019 car. The gas tank is being welded currently, and the SolidWorks models for the routing of the exhaust is just about complete, and progress has been made on the wiring harness.
Thank You!

In addition to our sponsors, we are thankful for the unending support of the following individuals:

Dr. Thomas Juska
Applied Research Lab

Admiral Paul Sullivan
Executive Director, Applied Research Lab

Dr. Matthew Parkinson
Learning Factory Director

Dr. Todd Palmer
Applied Research Lab

Cindy Winkelblech
Program Administrator

Dr. Gary Gray
FSAE Faculty Advisor

Bill Genet
Learning Factory Supervisor

Rob McAllister
Learning Factory Supervisor
