

# Cracking the Code: Summary & Resources

## Approach 1: Positive Early Exposure

Summary:	Pros:	Cons:
Tech's gender disparity is best solved by exposing young girls to tech early on via educational programs and formal tech classes	<ul style="list-style-type: none"><li>- Many programs already exist (Black Girls Code, Girls Who Code)</li><li>- Already teaching thousands of children</li><li>- Many programs are affordable or nonprofit</li><li>- Encouraging girls to work with tech (via Girl Scouts, the media) is free</li></ul>	<ul style="list-style-type: none"><li>- Existing programs are small/seasonal</li><li>- Time and location are constraints (especially for working families)</li><li>- Approach doesn't help girls from families who believe the industry is only for men</li><li>- Media representation is still arguably lackluster</li></ul>

### Questions to consider:

- What are your early experiences with technology and computers? How has this influenced you today?
- How can we advocate for inclusive depictions of gender diversity in STEM?
- How can we help schools and states with lacking resources (i.e. coding instructors, computers, etc.)?
- How might we provide coding classes to lower income families who might not be able to afford programs like Girls Who Code?

## Approach 2: Corporate Roles

Summary:	Pros:	Cons:
Tech's gender disparity is best solved by ensuring tech workplaces are welcoming to women via sensitivity training and equal pay practices	<ul style="list-style-type: none"><li>- Bystander training has been shown to increase the number of interventions</li><li>- Respectful workplace attitudes can spread to other environments</li><li>- Women with a genuine interest in coding will not be deterred from jobs by extenuating circumstances</li></ul>	<ul style="list-style-type: none"><li>- Speaking out in an unsupportive workplace can be uncomfortable and dangerous</li><li>- Informational training can have little impact on gender bias</li><li>- Gender ratio requirements may force hiring of underqualified women</li><li>- Well-meaning men could feel villainized by gender bias training</li></ul>

### Questions to consider:

- What makes a positive workplace environment? How do we promote this environment?
- How do we support victims who step forward when confronting workplace harassment?
- How can we encourage business to provide sensitivity training for gender bias?

# Cracking the Code: Summary & Resources

## Approach 3: Difficult Conversations

Summary:	Pros:	Cons:
Tech's gender disparity is best solved via open discussion of women's experiences in the industry and holding everyone accountable for their actions that uphold the status quo	<ul style="list-style-type: none"><li>- Increased external education on diversity leads to more diversity in the field</li><li>- Gives voice to women who were previously silenced when speaking about their experiences</li><li>- Changing attitudes in the tech industry has potential to change attitudes in our culture as a whole</li></ul>	<ul style="list-style-type: none"><li>- Can be costly to obtain the necessary resources to properly educate people</li><li>- Backlash from people who refuse to engage with the conversation in a productive manner can be tiring</li><li>- Can be difficult to fully avoid businesses that don't make gender diversity a priority</li></ul>

### Questions to consider:

- Why are Americans hesitant to express their discomfort with discrimination they experience in the workplace when they already share their entire lives via social media?
- What progress have we made in the gender gap and how did we achieve this?
- How will we know when the issue is "resolved"?
- What can an individual do to propel conversations about blatant sexism?
- Why is our society so hesitant to accept the gender disparity as real and problematic?
- How can we persuade people that are resistant to change?
- How can we give educators the tools to approach this topic?

---

**A special thank you to Carmen Cole, Joslenne Pena, and Kathyleen O'Leary at Code For Her for inspiring this conversation. For information about their mission, go to <https://sites.psu.edu/codeforher/>.**

**Another thank you to the Penn State Library for research assistance. For more information on the services they provide, go to <https://libraries.psu.edu/>.**
